

DIZRUPT

Interview Preparation Document

Role 1: Social Media Manager & Content Creator Intern

Role 2: AI and Automation Intern

Mumbai (Hybrid) | 3–6 Months | Undergraduate Students

1. About Dizrupt

Dizrupt is a **solutions-led, full-stack digital marketing agency** headquartered in Mumbai. Founded by Shamit Gandhi (HR College of Commerce & Economics alumnus), the agency's mission is to revolutionise how businesses approach their digital presence — not through conventional tactics, but by challenging norms and producing tangible, measurable results. Dizrupt operates on the belief that every brand is unique and needs a tailored approach combining data, creativity, and technology.

The agency offers end-to-end brand solutions — from building a brand identity from scratch to sustaining and scaling it digitally. With a client portfolio spanning **6 countries**, Dizrupt works across branding, SEO, social and paid media, production, and digital content creation. Its internship programme is a direct reflection of its focus on **AI integration and content innovation** — two areas that define its competitive edge.

Type	Full-Stack Digital Marketing Agency
Founded	Active since ~2018–19; current structure led by Shamit Gandhi
HQ	Mumbai, Maharashtra, India
Global Reach	Client portfolio across 6 countries
Founder	Shamit Gandhi (also handles: Akshat Goenka – strategy)
Website	www.dizrupt.in shamit.g@dizrupt.in
Core Belief	Data at the core; every brand needs a tailored digital approach

2. Services Portfolio

Service	Description
---------	-------------

Branding Solutions	Brand identity design, brand guidelines, positioning, and visual language creation from concept to launch.
SEO	Search engine optimisation strategies to drive organic discovery and long-term digital visibility.

Social & Paid Media	Social media management, community building, and performance-driven paid advertising campaigns.
Production Solutions	Content production — video, photography, and creative assets for digital deployment.
Digital Content Creation	Conceptualisation and creation of platform-native content — reels, carousels, scripts, and written copy.
AI & Automation	Internal focus: using AI tools and automation to improve workflow efficiency, content quality, and turnaround times.

3. Company Principles

Dizrupt's culture is built on four core principles that directly shape what they look for in interns:

- **Professionalism** — Integrity, competence, and a commitment to excellence. Interns are expected to own their output, not hand it in half-done.
- **Innovation** — Visionary thinking and pushing boundaries. The team values people who bring new formats, ideas, and approaches — not those who replicate what already exists.
- **Target Driven** — Unwavering focus on goals. Both internship roles have measurable weekly output expectations. Effort without results is not enough.
- **Solution Oriented** — Navigate challenges and deliver solutions. Interns should solve independently before escalating.

4. Industry Context — Digital Marketing & AI in 2025

Understanding the landscape Dizrupt operates in will help you answer strategic questions confidently.

- India's digital advertising market is projected to cross ■ 50,000 crore by 2026, with social media and content marketing capturing the largest share of growth.
- Short-form video (Instagram Reels, YouTube Shorts) has become the dominant content format, with brands allocating a growing share of budgets to Reels-first strategies.
- AI tools — ChatGPT, Claude, Midjourney, DALL·E, and automation platforms like Zapier and Make — are now standard in agency workflows, reducing content turnaround times by 30–60%.
- Creator economy convergence: brands increasingly blur the line between brand accounts and creator-style content — requiring social media managers to think like creators, not schedulers.
- Prompt engineering has emerged as a core professional skill. The ability to produce reliable, structured outputs from LLMs is now as valuable as traditional copywriting or design.
- Channel partners and small agencies like Dizrupt are differentiating by offering AI-augmented services — faster ideation, AI-generated visual mockups, and automated reporting — at boutique quality.

5. Competitive Landscape

Competitor	Description
Social Beat	Full-service digital agency based in Mumbai/Chennai; strong in social media and influencer marketing.
Schbang	Integrated marketing agency with deep brand strategy and content capabilities; known for high-production campaigns.

Foxtymoron	Creative-first digital agency with a strong social media and content team; boutique-to-mid-tier.
Dentsu Webchutney	Large digital network agency known for award-winning creative and tech integration.
Freelancers & indie agencies	Mumbai has a thriving ecosystem of small content studios and solo creators competing for startup and D2C brand budgets — Dizrupt's primary client segment.

ROLE 1: Social Media Manager & Content Creator Intern

Instagram · LinkedIn · Short Video · Reels · Content Strategy · Brand Voice

6. Role Summary — Social Media & Content Intern

Role	Social Media Manager & Content Creator Intern
Location	Mumbai (Hybrid)
Duration	3 to 6 months
Eligibility	Undergraduate students — Business, Media, Design, Marketing or related
Nature	Creative ownership role with structured responsibility — not an assistance role
Key Platforms	Instagram, LinkedIn, short video platforms (Reels, YouTube Shorts)
Tools	CapCut, Premiere Pro, Final Cut (preferred); Canva or similar design tools
KPIs	Weekly content output; engagement and performance tracking; consistent idea pipeline

7. Key Responsibilities Breakdown

Responsibility	What It Means in Practice
Trend Identification	Monitor Instagram, LinkedIn, and short video platforms for emerging trends; understand the 'why' behind what performs — not just surface-level mimicry.
Content Conceptualisation	Propose original content formats and recurring content series; develop hooks, scripts, and storytelling structures tailored to Dizrupt's brand voice.

Content Creation	Shoot or coordinate production; create Reels, carousels, short videos, and written posts; edit visual and video assets to publish-ready standard.
Calendar Management	Maintain a structured content calendar; maintain an idea bank of future concepts for consistent output.
Performance Analysis	Track engagement, reach, and content performance data; use insights to refine creative direction — not just report numbers.
Brand Voice	Ensure all content is consistent with Dizrupt's positioning as an innovative, data-driven, boundary-pushing agency.

8. Interview Q&A — Social Media & Content Role

8A. Domain-Specific Questions

1. How do you decide whether to adapt a trend or create original content?

Trends should be adapted when: (1) the format fits the brand's tone without forcing it; (2) the trend is still early enough to feel timely, not overexposed; and (3) adapting it adds something — a new angle, a brand-specific twist — rather than copying blindly. Original content is the right call when a trend doesn't fit the brand's voice, when the niche has a unique story to tell, or when the goal is to set the conversation rather than join it. For Dizrupt — a marketing agency — original content that demonstrates expertise (marketing insights, behind-the-scenes, case studies) will often outperform trend chasing because it reinforces credibility.

2. What makes a strong hook for a Reel or short video?

A strong hook solves a problem the viewer didn't know they had, or triggers immediate curiosity in the first 1–2 seconds. The best hooks work by: (1) stating a counterintuitive truth ('Most brands are posting at the wrong time — here's why'); (2) making a direct promise ('3 content formats that doubled our client's reach'); (3) using pattern interrupts — an unexpected visual, sound, or opening line that stops the scroll. For LinkedIn, hooks that open with a bold claim or a relatable professional tension perform consistently. For Instagram Reels, visual energy in the first frame combined with on-screen text hooks drive completion rates.

3. How would you build a content calendar for a digital marketing agency like Dizrupt?

I would structure it around content pillars: (1) Expertise content — marketing tips, trend breakdowns, platform updates; (2) Work showcase — case studies, before/after, client results (with permission); (3) Culture and team — behind-the-scenes, team moments, agency POV; (4) Engagement content — polls, questions, reactive posts on trending marketing topics. I'd plan 2–3 weeks ahead in a calendar with columns for platform, format, topic, status, and caption. I'd also maintain a 'reserve bank' of 5–7 ready-to-publish pieces for weeks when fresh content runs behind. Posting cadence: 4–5x per week on Instagram, 2–3x on LinkedIn.

4. How do you measure whether a content strategy is working?

Metrics should match the objective. For awareness: reach, impressions, and follower growth. For engagement: saves and shares (stronger signals than likes), comment quality, and reply rates. For conversion: link clicks, DM enquiries, and profile visits. I track these weekly, look for patterns across content types (does carousel outperform Reels for this brand?), and use that data to shift the content mix. I also track qualitative signals — are the right people commenting? Is the brand getting mentioned in conversations? Numbers without context can mislead — a viral post that attracted the wrong audience is not a win.

5. What is the difference between content for Instagram and LinkedIn — and how would you adapt the same idea for both?

Instagram is visual-first, emotion-driven, and rewards aesthetic consistency and Reels discoverability. LinkedIn is professional, idea-driven, and rewards depth, personal POV, and text-heavy storytelling. Take an example: Dizrupt wants to post about 'why most brands fail at social media'. On Instagram, I'd build a punchy 30-second Reel with on-screen text, a strong hook, and a CTA to save the post. On LinkedIn, I'd write a 150-200 word post with a bold opening line, 3 clear reasons, and a question at the end to drive comments. Same idea — two completely different executions based on platform behaviour.

8B. Behavioural Questions

1. Tell me about a piece of content you created that performed well — and why you think it worked.

Use STAR. Describe any content you created — for a college page, personal account, or internship. Go beyond 'it got a lot of likes.' Analyse why it worked: was it the hook, the format, the timing, the topic? Show that you have a diagnostic instinct, not just luck. If you don't have a strong example yet, describe a piece you observed, analyse what made it effective, and explain what you would replicate.

2. How do you handle it when your creative idea gets rejected or changed significantly?

Acknowledge the feedback without defensiveness. Then ask one clarifying question: 'Is the concern the format, the topic, or the tone?' — because that shapes what I iterate on. Creative work in an agency context is collaborative, not personal. The goal is the best possible output for the brand, not validation of my idea. I'd then rework and come back with two options — giving the reviewer a choice is usually more productive than defending the original.

3. Describe a time you noticed a trend before it became mainstream.

Draw from your own digital consumption. Have you noticed a content format on a niche creator before it hit mainstream brands? A topic gaining traction in comments before it became a headline? Describe what you observed, why you recognised it early, and what you did with that observation. Dizrupt values 'cultural observers' — people who are wired to notice patterns in digital behaviour, not just consumers.

8C. Situational Questions

1. You are given one week to grow Dizrupt's Instagram from 0 to a strong starting base. What do you do?

Week 1 sprint: Day 1 — audit the niche: what are top digital marketing accounts posting? What formats and topics perform? Day 2 — set up the profile completely: bio, highlights, consistent visual identity. Days 3–7 — publish 5 pieces of content: 2 Reels (trend-adapted or insight-driven with strong hooks), 2 carousels (practical tips, swipeable), 1 engagement post (poll or question). Simultaneously, engage actively in comments of relevant accounts to drive profile visits. The goal in week 1 is not viral reach — it is demonstrating a clear, consistent brand voice and building a content foundation.

2. A trend is going viral on Instagram but it doesn't fit Dizrupt's brand tone. Do you post it?

No — unless I can find a genuinely relevant twist. Chasing every trend dilutes brand identity. I would assess: can Dizrupt comment on this trend from its expert angle? For example, if a 'brain rot' audio trend is viral, Dizrupt could create a post about 'why this trend works and what brands can learn from it' — turning the trend into a thought leadership moment rather than copying it blindly. If no credible angle exists, I skip it and focus on original content that builds the brand long-term.

3. You have no brief, no instruction, and three hours. What content do you produce for Dizrupt today?

This question tests initiative and self-direction. My answer: I check what is trending on Instagram and LinkedIn in the marketing/agency space in the last 24 hours. I pick the most relevant angle for Dizrupt's audience — probably a marketing insight, a trend breakdown, or a quick agency POV. I write a script with a strong hook, film or design a visual, edit it to 30–45 seconds, and caption it with a CTA. Three hours is enough for a high-quality Reel or a polished carousel — I don't need a brief to produce.

9. Key Interview Tips — Social Media & Content Role

- Come with a portfolio: even one strong Reel, carousel, or content concept you've created for any page. Published work beats theoretical answers.
- Audit Dizrupt's own digital presence before the interview — note what they post, what format, what tone, and come with one specific suggestion for improvement.
- Know your platforms deeply: be ready to discuss Instagram's algorithm (Reels vs. feed vs. Stories), LinkedIn's organic reach dynamics, and what drives saves vs. shares.
- Demonstrate cultural awareness: reference a trend you noticed early, a content format you think is underutilised, or a creator whose strategy you admire and why.
- Show structured thinking: creativity alone isn't enough — Dizrupt wants someone disciplined with timelines and performance tracking. Mention how you'd manage a content calendar.
- Ask a smart closing question: 'What does the brand voice brief for Dizrupt currently look like?' or 'Which content format has performed best for your clients recently?'

ROLE 2: AI and Automation Intern

LLMs · Prompt Engineering · Workflow Automation · AI Agents · Zapier · Make

10. Role Summary — AI and Automation Intern

Role	AI and Automation Intern
Location	Mumbai (Hybrid)
Duration	3 to 6 months
Eligibility	Undergraduate students — Business, Design, Technology or related
Nature	Execution-focused, output-driven — not a research internship
Commitment	15 to 20 hours per week
Key Tools	ChatGPT, Claude (LLMs); Midjourney, DALL·E, Stable Diffusion; Zapier, Make (automation)
KPIs	Weekly measurable output; documented workflows; reduced turnaround time on recurring tasks

11. Key Responsibilities Breakdown

Responsibility	What It Means in Practice
AI Agent Building	Design and deploy task-specific AI agents that handle internal workflows — research, content, reporting, and operations — with minimal human intervention.
Workflow Automation	Identify manual, repetitive tasks inside Dizrupt and build automations using tools like Zapier or Make to eliminate or reduce human effort.
LLM Structured Outputs	Use ChatGPT and Claude with carefully engineered prompts to produce reliable, consistent business outputs — briefs, reports, copy, analysis.
Image Generation	Use Midjourney, DALL·E, or Stable Diffusion to create design concepts, visual mockups, and creative assets for client projects or internal use.
Prompt Library Creation	Build and document reusable prompt libraries and AI usage systems so the entire team can benefit — not just the intern.
Documentation	Every workflow or system built must be clearly documented so it can be reused, modified, and handed over. If it's not documented, it doesn't count.
QA and Refinement	Test AI outputs rigorously; identify failure patterns; refine prompts and systems based on output quality — not just first-pass results.

12. Interview Q&A — AI and Automation Role

12A. Domain-Specific Questions

1. What is prompt engineering and why does it matter?

Prompt engineering is the practice of designing inputs to AI language models in a way that produces reliable, accurate, and useful outputs — consistently. It matters because LLMs are probabilistic: a poorly structured prompt yields inconsistent or hallucinated outputs, while a well-engineered prompt with clear role, context, constraints, and output format produces business-grade results. Key techniques include: role prompting ('You are a senior marketing strategist...'), chain-of-thought prompting (asking the model to reason step by step), few-shot examples (giving 2–3 examples of the desired output format), and constraint specification (output in JSON, keep under 100 words, avoid jargon). For Dizrupt, strong prompt engineering directly reduces the time spent editing AI output before it can be used.

2. What is the difference between Zapier and Make (formerly Integromat) — and when would you use each?

Both are no-code automation platforms that connect apps via triggers and actions. Zapier is more beginner-friendly — linear 'if this, then that' workflows (called Zaps) with a large library of pre-built integrations. It's best for simple automations: 'When a new lead fills a form → add to Google Sheet → send a Slack notification.' Make is more powerful and visual — it supports complex, multi-branch workflows with loops, filters, and conditional logic, at a lower cost for high-volume tasks. For Dizrupt, I'd use Zapier for quick, low-complexity automations (client onboarding, reporting triggers) and Make for more sophisticated workflows like multi-step content approval pipelines or automated social reporting.

3. How would you identify which tasks in a company are worth automating?

I'd apply a simple 3-question filter: (1) Is it repetitive? — done the same way more than twice a week. (2) Is it rule-based? — does a human follow a predictable logic each time, or is significant judgement required? (3) What is the time cost? — multiply hours per week by team size; even saving 2 hours/week per person across a 10-person team is 20 hours recovered. In a digital agency like Dizrupt, high-value automation candidates include: generating first-draft content briefs from a template, summarising client call notes, creating weekly performance reports from analytics data, and resizing/repurposing content for different platforms.

4. What is an AI agent and how is it different from a simple ChatGPT prompt?

A standard ChatGPT prompt is a single-turn interaction: you input, the model outputs. An AI agent is a system that can take multi-step actions autonomously — it can use tools (web search, code execution, APIs), make decisions based on intermediate results, and loop until a task is complete. For example: a simple prompt asks ChatGPT to summarise a competitor's website. An AI agent would automatically fetch the website, extract key sections, compare them against a template, format the output, and send it to a Slack channel — with no human step-in between. At Dizrupt, an AI agent could automate the weekly competitor content audit — a task that currently takes hours manually.

5. What are the limitations of AI tools you have used — and how do you manage them?

Key limitations: (1) Hallucination — LLMs can confidently produce false information, especially for specific facts, statistics, or recent events. Mitigation: always verify factual claims; use web-search-enabled models for current data. (2) Inconsistency — outputs vary between runs even with identical prompts. Mitigation: use temperature settings (lower = more deterministic), and test prompts across 5–10 runs before deploying. (3) Context window limits — very long inputs can cause the model to lose earlier context. Mitigation: chunk long documents and summarise progressively. (4) Image generation accuracy — Midjourney and DALL·E struggle with text in images and realistic hands. Mitigation: use for concept/mood boards rather than final assets. Knowing the limits of your tools is what separates a responsible AI user from a reckless one.

12B. Behavioural Questions

1. Tell me about a workflow or process you improved using an AI tool.

Describe any genuine experiment — even personal. Did you build a prompt that generates your college assignment outlines in a specific format? Did you automate a repetitive task using a no-code tool? Did you use Midjourney for a design mockup that saved hours? Quantify the impact where possible: 'Cut my research time from 3 hours to 45 minutes.' Dizrupt wants to see that you have actually used these tools in practice, not just know their names.

2. How do you document a workflow so someone else can replicate it?

Good documentation has: (1) a one-line summary of what the workflow does and why it exists; (2) a step-by-step description of each action, tool used, and input/output at each stage; (3) the exact prompts used (for AI workflows); (4) edge cases and known failure points; and (5) a quick-start guide for someone new. I'd document in Notion or a Google Doc with screenshots or a Loom video walkthrough for complex steps. The test: can someone with no context pick this up and run it on day one?

3. Describe a time you had to figure out something technical with no one to guide you.

Draw from any self-taught experience — learning a tool from YouTube, debugging a no-code workflow through trial and error, or building your first automation. Emphasise the process: how you broke the problem into steps, what resources you used, how you tested your solution, and what you learned. The AI Intern role explicitly requires independent problem solving before escalation — this story proves you can do it.

12C. Situational Questions

1. Dizrupt's team spends 4 hours each Monday compiling a weekly performance report from multiple client analytics dashboards. How do you tackle this?

Step 1: Map the current process — which dashboards, which metrics, what format does the final report take? Step 2: Identify what can be pulled automatically — most platforms (Meta, Google Analytics, LinkedIn) have APIs or export functions. Step 3: Build a Zapier or Make automation that pulls data from each source on a schedule and populates a Google Sheet. Step 4: Use a Claude or ChatGPT prompt to generate a narrative summary of the numbers — 'Here are this week's key trends and recommendations.' Step 5: Format and deliver automatically via Slack or email. Target: reduce 4 hours to under 30 minutes, with the intern only reviewing the final output.

2. You are asked to build a prompt library for Dizrupt's content team. Where do you start?

Step 1: Audit current usage — speak to each team member about their most repeated AI tasks (caption writing, brief creation, ideation, competitor research). Step 2: Identify the top 8–10 use cases by frequency and time saved. Step 3: For each, write and test a structured prompt — include role, context, constraints, and output format. Test across 10 runs for consistency. Step 4: Organise the library in Notion with categories (Content, Research, Client Comms, Reporting), usage notes, and example outputs. Step 5: Run a 15-minute team walkthrough so everyone actually uses it — a library no one uses is wasted effort.

3. An AI output you built for a client deliverable contains an error that almost goes unnoticed. How do you handle it?

First: flag it immediately — before it reaches the client. Transparency with the team is non-negotiable. Second: fix the error and deliver the corrected version. Third: do a root cause analysis — was it a hallucination? A prompt design flaw? A gap in my QA process? Fourth: update my testing checklist or prompt to prevent recurrence. AI tools are powerful but imperfect — the intern's responsibility is to be the quality gate between AI output and client delivery. Catching the error and learning from it is the professional response; hiding it is not.

13. Key Interview Tips — AI and Automation Role

- Come with a concrete AI experiment: even a well-designed prompt, a Zapier workflow, or a Midjourney image series. Showing is far more powerful than describing.
- Know the tools by name: be ready to discuss ChatGPT vs. Claude differences, when to use Midjourney vs. DALL·E, and what Zapier and Make each do. Surface-level familiarity won't be enough.
- Demonstrate logical thinking: the JD says 'coding is not mandatory — clear thinking is.' Structure your answers in clear steps. Show you can break any problem into solvable parts.
- Talk about failures: the best AI practitioners know where tools break down. Showing you understand hallucination, inconsistency, and prompt failures signals experience over hype.
- Emphasise documentation: Dizrupt explicitly states every workflow must be documented. Mention that you default to writing things down — Notion, Google Docs, Loom videos.
- Ask a smart closing question: 'Which part of Dizrupt's operations is currently the most manual and time-consuming?' — this signals you're already thinking about where to add value from day one.
